# Application description and structure

General description

The app is an implementation of a web quiz where the user can choose between two themes. Each theme has a different set of questions and a different design.

Software structure and components

The app is implemented using Angular.js as a JavaScript platform and Angular Material as a UI component, layout and design framework. The app is also using angular-css-injector library (https://github.com/GabrielDelepine/angular-css-injector) to manage the different css files.

The general structure of the application is:
